How to run PRISM 1.0.0 using command line (simple four step procedure for WINDOWS/MAC/LINUX)

1. Make sure that you have Java installed, and the version should be 8.0 or higher. If you don't have Java you can download it freely from

http://www.oracle.com/technetwork/java/javase/downloads/index-jsp-138363.html

- **2.** Extract "PRISM 1.0.0.zip" file. The directory/folder "PRISM 1.0.0" will have the "prism.jar" file and sample V0 files under "/computed_params/" in folder and the sample configuration file under "/config_files/" folder.
- 3. Open a terminal window, and Change directory (cd) into the PRISM 1.0.0 directory/folder where the prism.jar file is located.

4. Type

java -jar prism.jar ./computed_parms/in ./computed_parms/out ./config_files/prism_config.xml

Any error messages that occur while prism is running will be written to the terminal window. The logs are located in the output directory <./computed_parms/out> along with the processed V1-V3 files. Copies of the original V0 files are also written here.

In 4. above, one can replace <./computed_parms/in> with the full path name of the directory where the sample test V0 files are located. Replace <./computed_parms/out> with the full path name of the directory where you want the results to be written. Replace <./config_files/prism_config.xml> with the full path name, *including file name*, of the configuration file that you downloaded.

Contact

Users are encouraged to e-mail the authors, Jeanne Jones (jmjones@usgs.gov), Erol Kalkan (ekalkan@usgs.gov), Christopher Stephens (cdstephens@usgs.gov), and Peter Ng (png@usgs.gov) with evidence of any problems or errors encountered while running PRISM.
